

Project Engineer

Position Overview

Our client is a leading manufacturer of petroleum-based industrial products. Today, the company owns and operates several facilities located in Mississippi, Utah, Wyoming, Texas, Wisconsin, and California, with two locations in Pennsylvania. They are seeking a Project Engineer for their facility in Smethport, PA. This is an onsite position and will report to the Engineering Manager. ***Please note – relocation services will be provide if required.*

Working in partnership with the engineering department and plant employees, the Project Engineer will take on a lead role in project management and engineering activities for capital and turnaround projects for the facility. They will work with external engineering consultants to assist in project engineering activities and provide support as an SME to the engineering team from two other facilities. There will also be major projects over and above the typical annual expenditure where the Project Engineer will either lead or have a key contributing role.

Responsibilities

- Support the safety and environmental efforts within the organization
- Lead and oversee the day-to-day engineering efforts for capital projects and turnaround projects for the site
- Key contributor to annual and future capital expenditure plans
- Execute projects from design through to commissioning on-time and budget forecasts
- Develop and maintain relationships with key contractors and vendors
- Work with and support the internal engineering resources
- Provide support to the maintenance department on root-cause problem resolution
- Lead the various project engineering efforts within the plant while providing subject matter expertise (SME) as required by other Refining teams

Experience, Qualifications & Attributes

- Bachelor's Degree in Engineering (Chemical, Electrical or Mechanical)
- Recent graduate OR 1-2+ years' experience in a manufacturing environment with project engineering experience
- Able to establish a quick rapport with individuals at all levels in/out of the organization, building constructive and effective relationships
- Efficient time management abilities focusing on what is important; can quickly zero-in on the critical and sense what will help or hinder accomplishing a goal and work to find a solution to accomplish tasks
- Use logic and methods to solve difficult problems; probes for answers; see/anticipate problems
- Effectively communicate information, ideas and recommendations to a diverse audience
